Figure 1 illustrates the mapping of a real-world map to a simplified representation. The top part shows a map with various features labeled: Highway (blue line), Secondary Road (grey line), Junction/Interchange/Entry (yellow star), Ridge/Physical Feature (brown line), Property/Fence Line (green line), NonVisible Boundary (dashed line), Stream/Shoreline (blue wavy line), Intermittent Stream (blue dashed line), River / Lake (blue wavy line), and Creeper (green squiggly line). The bottom part shows a simplified representation of the same map, where the features are represented by their respective symbols. Below this is a legend that maps the symbols to their corresponding feature names. At the bottom, there is a table with two columns: 'Inset' and 'Out Area'. The 'Inset' column contains the symbols for the features, and the 'Out Area' column contains the symbols for the features that are not in the area.

Where international, state, and/or county boundaries coincide, the map shows the boundary symbol for only the highest-ranking of these boundaries.

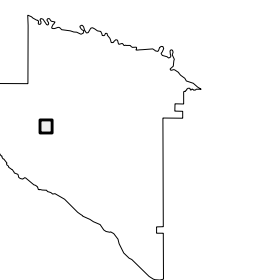

¹ A '*' following a place name indicates that the place is coextensive with a MCD. A '°' indicates that the place is also a false MCD; the false MCD name is not shown.

² A '*' following a block number indicates that the block number is repeated elsewhere in the block.
